

private connect

bandwidth changes everything

bandwidth changes everything

We are a bandwidth infrastructure provider delivering secure and reliable private connectivity across Europe.

14

metro cities with unique duct and fibre ownership

49

connected cities across 15 countries

1700+

on-net locations around Europe

350+

connected data centres means we are Europe's leading data centre connectivity provider

4

hours site to spares support in each city

99.999

%

availability on diverse routes on our infrastructure

private connect

The data driven world we live in demands greater accessibility, reliability and security of information. Private Connect uses dedicated fibre and equipment to create a solution that is tailored to you.

Private Connect provides you with the flexibility to own your own network and to keep the physical access control, while benefiting from our expertise in managing and operating a fibre infrastructure. By utilising our industry partnerships with equipment vendors, you can enable cost efficiencies within your own business and have a more secure, future-proof network.

Private Connect provides solutions for disaster recovery, business continuity and Cloud-based services using LAN and SAN technologies. Whether it is a single point-to-point connection, diverse routing or a multi-site ring, Private Connect can connect all of your sites and data centres for the applications your business needs.

Security no one is sharing your network, it's just you and your data. Private equipment will be installed at your chosen sites within your racks. Additional security features that can be added include in-flight encryption providing additional data protection.

Flexibility you can choose between point-to-point or diverse, protected or unprotected solutions. It's also up to you on what equipment provider you use and the capacity from day one.

Bespoke your network can connect two or ten sites; these can be office locations, data centres and can include 3rd party fibre for off-net data centres, buildings or regions. They can be connected by a topology of choice, Ring, Mesh, Any to Any; the design that works for you.

Scalability your day one capacity isn't fixed; your network can grow with you. As you require more bandwidth to continue expanding your business, your network capabilities can be increased. From 1Gbps to multiple 100G, the network is there for your business.

Performance Private Connect uses technology which inherits Layer 1 performance. This means your network uses less active components whilst providing you with full data transparency, a lower latency and removes interoperability concerns.

our network

At the core of our service is our network. We own and operate high capacity fibre networks in many of Europe's key business centres as well as a truly diverse and triverse backbone network.

We continue to invest in our footprint, adding new capabilities to sites in cities as well as new routes between cities and expanding our fibre reach.
