euNetworks Supports Kaia Global Networks Limited with European Backbone

London, UNITED KINGDOM – 4 June 2014 – euNetworks Group Limited (SGX: 5VT.SI), Europe’s bandwidth infrastructure provider, today announced it has expanded its relationship with Kaia Global Networks Limited (‘Kaia Global’), a specialised European network service provider.

euNetworks has been working with Kaia Global since 2013, delivering multiple Wavelengths and Fibre connecting all major European cities. More recently, Kaia selected euNetworks to deliver further capacity on their European network with multi-year agreements in place.

Kaia Global’s early success came from building a network that was reliable, with the low latency performance needed to service a large community of latency sensitive consumers. Since then the business has expanded its served customer base, and today delivers its networking services to a number of different and growing segments. Kaia’s service portfolio includes Global IP Transit, Layer2 transport and managed services, including colocation and backbone connectivity.

“Our customers’ connectivity needs continue to grow, driving us to invest further in our long haul backbone network across Europe,” said Andy O’Meany, Managing Director of Kaia Global Networks. “It is imperative to us that we maintain the performance and experience our customers selected us to deliver. euNetworks has been able to provide us with both the long haul bandwidth and the option to further scale in line with our customers’ demands, which is vital as we future proof our infrastructure. The technical expertise and flexibility we receive from euNetworks is invaluable as we continue to expand.”

“We are delighted to be working closely with Kaia Global Network, having become one of their infrastructure providers across Europe,” said Kevin Dean, Chief Marketing Officer of euNetworks. “We understand the ever-growing demands on their network as bandwidth demand continues to rise with their customer’s consumption, and look forward to a long relationship with Kaia Global, supporting them across the region.”

About euNetworks

euNetworks Group Limited (SGX: 5VT:SI) is a bandwidth infrastructure provider, owning and operating 13 fibre based metropolitan networks across Europe connected with a high capacity intercity backbone covering 38 cities in 9 countries. The Company offers a portfolio of metropolitan and long haul services including Colocation, Dark Fibre, Metro Wavelengths, Wavelengths, Ethernet, and Internet. Enterprise and carrier customer’s benefit from euNetworks’ unique inventory of fibre and duct based assets that are tailored to fulfil their high bandwidth needs.
