

## **MESH enhances European Footprint in Partnership with euNetworks**

- Company opens third point of presence in Amsterdam utilising euNetworks' Colocation and Bandwidth Infrastructure

**Düsseldorf, Frankfurt, GERMANY – 6 September 2012** – MESH GmbH, an independent Internet Service Provider (ISP) for infrastructure, today announced that it has further enhanced its European footprint, opening a new Point of Presence (PoP) in Amsterdam in partnership with euNetworks Group Limited (SGX: H23.SI).

euNetworks has supported MESH's growing business with its metropolitan bandwidth infrastructure services for over three years, enabling high speed connection to MESH Enterprise Grade IaaS platforms. Today's announcement delivers MESH with its third cloud ready PoP in the Netherlands, located within euNetworks' data centre in Amsterdam. euNetworks is also delivering further bandwidth services, enabling MESH to expand its backbone, and hence delivery of high quality Internet services such as managed Infrastructure as a Service (IaaS), Colocation and Internet Protocol (IP) to companies.

MESH offers an intelligent enterprise grade infrastructure cloud platform and neutral colocation to enterprises and SMEs. While founded in the German market and headquartered in Düsseldorf, more recently MESH has expanded its capability in Europe, offering its services and platforms from 27 PoPs across Europe. The MESH backbone in Amsterdam offers diverse connectivity to AMS-IX and multiple Tier 1 carriers. This in-turn delivers its customers with high quality and more secure Tier 1 upstream capabilities. Their direct connection expedites Internet access and minimises latencies, particularly for enterprise grade IaaS.

With solutions from a single rack to a full suite, euNetworks' Colocation is an optimal data centre solution for Carriers, Cloud operators and Enterprises wanting to host equipment in secure, standardised, and managed premises. This capability combined with euNetworks' fibre based metropolitan city network such as that in Amsterdam, and its long haul fibre network between cities, offers partners such as MESH with the scalable infrastructure they require for business growth.

"We are delighted to be supporting MESH as they continue to expand and enhance their operations, both in Germany and more broadly across Europe," said Uwe Nickl, Chief Marketing Officer of euNetworks. "The combination of the bandwidth infrastructure of euNetworks and the managed services provided by MESH continue to deliver a strong solution to enterprise and SME companies today."

"Amsterdam is an important Internet hub in Europe," said Claudia Gharavi, Managing Director of MESH. "We are pleased to announce our expansion in the city in co-operation with our loyal partner euNetworks, and at the same time, the enhancement of our European footprint. Our customers who look to expand their businesses to Amsterdam will benefit from a direct and diverse connection to important peering points and seamless access to our portfolio of managed services with our latest investment."

## About euNetworks

euNetworks Group Limited (SGX: H23:SI) is a bandwidth infrastructure provider, owning and operating 13 fibre based metropolitan networks across Europe connected with a high capacity intercity backbone covering 38 cities in 9 countries. The Company offers a portfolio of metropolitan and long haul services including Colocation, Dark Fibre, Metro Wavelengths, Wavelengths, Ethernet, and Internet. Enterprise and carrier customers benefit from euNetworks' unique inventory of fibre and duct based assets that are tailored to fulfil their high bandwidth needs.

euNetworks Group Limited is headquartered in London and publicly listed on the Singapore Stock Exchange. For further information please visit [www.eunetworks.com](http://www.eunetworks.com).

## About MESH GmbH

MESH, headquartered in Dusseldorf, is an independent Internet Service Provider for infrastructure for midsize and large companies. MESH developed for its customers a "Solution-as-a-Service" approach, covering individually tailored, enterprise grade IT infrastructure and services. Solutions that were previously reserved for their capital intensity and complexity of large enterprises, are now accessible for midsize and large companies. The vendor-neutral portfolio includes scalable, secure infrastructure solutions like Colocation, IP services and private cloud computing (IaaS). Standard Service Level Agreements (SLAs) and managed data security complete the services. For further information visit [www.mesh.eu](http://www.mesh.eu)
