

EUNETWORKS PROVIDES ON-DEMAND DATACENTRE CONNECTIVITY FOR BLUEDOME

- Agreement between Dutch Managed Hosting Provider BlueDome and euNetworks – Europe's foremost provider of high performance networking solutions raised the bar for datacentre connectivity
- euFreedom Ethernet solution delivers guaranteed low latency connectivity
- euFibre provides secure private networks for mission critical communication

Amsterdam, The Netherlands, 14 April 2009 – an agreement between euNetworks (SGX: H23.SI), Europe's foremost provider of mission-critical, high-performance networking solutions, and Dutch Managed Hosting Provider BlueDome IAS BV (BlueDome), raised the bar again for datacentre connectivity.

euNetworks' unique set of solutions are a perfect fit for BlueDome's business of delivering hosting, implementation and management of mission-critical websites and web-applications. euNetworks implemented euFreedom, the low-latency, high performance network solution, and euFibre, a dedicated, private fibre network, providing BlueDome with a highly secure and scalable platform to ensure mission-critical communications.

Marcel Ravenshorst, Commercial Director and Co-founder of BlueDome, commented:

"BlueDome required a reliable and scalable networking solution to connect our datacentres in the Netherlands, supporting our next-generation communication requirements. euNetworks uniquely enabled us with on-demand Ethernet connectivity between Amsterdam and Rotterdam and a private fibre ring between our sites in Amsterdam and Schiphol-Rijk. These two solutions form an integrated platform designed to meet our most exacting requirements in terms of scalability, latency and security."

Barry Nolan, Chief Operating Officer of euNetworks, commented that "For a company such as BlueDome, who is a specialist in the management of online applications, connectivity is key – without a high-performance network, they will be out of business. The combined solution of euFreedom and euFibre, offering a secure network with guaranteed low latency and on-demand scalability, was a perfect fit. Leveraging our pan-European network, we were able to deliver the solution 'on-demand' in days, not weeks, using our massive pre-provisioned capacity."

About euFreedom

- euNetworks designed euFreedom to meet the ever-increasing need for high performance Ethernet connectivity. euFreedom offers unparalleled flexibility: the freedom to change connectivity on-demand as business needs change.

- Customers can choose from over 100 leading European datacentre locations and can move or change their connectivity hassle free, or add a new site in as little as one day.
- euNetworks can guarantee low-latency, high availability & fast provide performance because they fully own a €1bn all-optical European infrastructure.
- euFreedom is an all-optical service, typically delivered as an optical Gigabit port.

About euFibre

- euFibre is a dedicated, private fibre network, build and used exclusively by euNetworks customers.
- A fully owned network, euFibre is designed around the need for a secure, high performance network, with virtually unlimited capacity
- euFibre supports any protocol and can be used with a broad range of bespoke DWDM technology.
