EuNetworks announces collaboration with Redbus and Global Switch to provide Business Continuity over a Private Fiber Network in Frankfurt am Main

Frankfurt, 13th, September 2006 – euNetworks (SGX: H23.SI), owner and operator of Europe's highest capacity fiber network, announced their collaboration with datacenter providers Redbus Interhouse (Germany) GmbH and Global Switch FM GmbH to launch a unique distributed datacenter solution for the provision of Business Continuity in the city of Frankfurt am Main. The first customer to sign up for this service was the i:FAO Group, who has reported 100% availability of their Business Travel e-Procurement System since they began utilising the service.

A major power cut in Frankfurt in 2004, while it did not effect i:FAO, did spur Alexander Schott, Chief Technology Officer at i:FAO, to evaluate their disaster recovery plans. Schott concluded that while all components of the IT infrastructure were already redundantly implemented, and a back-up system was in place, the risk that such a power cut would pose to i:FAO was too great to ignore.

Albrecht Kraas, Chief Technology Officer, euNetworks said; " The threat of downtime, for even a small number of hours, is at the forefront of every senior manager's mind. This is particularly true for a company like the i:FAO group where their business is dependent on the availability of an online booking platform. euNetworks, with its partners, developed a highly, secure solution to provide the required resilience. Our unique proposition of delivering and operating dedicated private fiber networks means that clients are now able to mirror IT systems more than six kilometres apart and this key geographical distance minimises the risk of both locations being effected by the same event."

"Our customers require access to our service anytime, anywhere and any downtime is unacceptable. It is vital that our solution is always available and service is fast. We now believe that we have a unique solution that we can rely on 100%." said Schott.

Unique Value Proposition – Private Fiber Networks

The distributed business continuity solution runs exclusively over euNetwork's highly secure and resilient fiber network. EuNetworks provides a dedicated optical fiber connection between two data centres operated by Redbus Interhouse and Global Switch in Niederrad and Rödelheim (Frankfurt) respectively. The state-of-the-art facilities are ideally located to provide a mirrored IT solution and include the support of fully redundant power supplies and high specification cooling & fire protection systems. In the unlikely event of a disaster, all customer transactions can be switched from one data centre to the other in a matter of seconds.

euNetworks' private fiber networks inherently deliver redundancy through their unique mesh configuration, enabling the highest availability levels in the industry. The seamless network links "long-haul" (country-to-country/city-to-city) fiber between five key geographies - Germany, Netherlands, United Kingdom, France and Belgium – to 15 "last-mile" (inner-city) fiber networks in Amsterdam, Berlin, Cologne, Dublin, Dusseldorf, Frankfurt, The Hague, Hamburg, Hanover, London, Munich, Paris, Rotterdam, Stuttgart and Utrecht.
