

Bandwidth  
from the  
ground up

## Private Connect is a solution that provides the choice and flexibility of your own bespoke and dedicated network, without the investment and in-house team required to build, own and operate it yourself.

Private Connect combines DWDM equipment installed at your sites, in your racks, with dedicated Dark Fibre from euNetworks. The solution is bespoke to the requirements of your business with your choice of bandwidth, diversity, network design and topology, and equipment vendor.

Your solution is supported by euNetworks' expertise in managing and operating fibre infrastructure, monitored by our Customer Care Centre with SLA options for up to 99.999% service availability.

Alongside our own expertise, we take advantage of our long established vendor relationships. This means access to more technical knowledge in sectors and the benefits of equipment vendor technology roadmap.

### Private Connect

Private Connect is a dedicated solution tailored specifically for your needs, whether that's for scale, security, or managing for future bandwidth growth cost effectively. Private Connect addresses the need for disaster recovery, business continuity and Cloud-based services.

Private Connect can connect all of your sites and data centres to the applications that your business needs.

17

Metro cities with unique duct & fibre ownership

2,200+

Fibre connected locations

51

Connected cities in 15 countries

440+

Directly connected data centres

99.999%

Availability on diverse routes

# Network Features

Our network footprint provides low latency and diverse connectivity options between key data centres in each of our 17 metros.

## Performance

1G to 400G bandwidth options available with a choice of protocols including Ethernet, Fibre Channel and Optical Transport Unit (OTU). Private Connect offers multiple network protection options, from fully diverse fibre routing to automated route switching.

## Secure

No one else shares your network. It's just you and your data. Private DWDM equipment is installed at your chosen sites in your own racks and connected with euNetworks dedicated dark fibre.

## Bespoke

We work with your Network and Storage Architects to deliver a solution that meets your specific requirements with your choice of equipment and topology.

## Flexible

You can choose exactly how you want your network built. From diverse, triverse and quadverse network topology, to enhanced resilience levels and security features, as well as other integrated technologies and suppliers.

## Scalable

Your solution delivers to your requirements from day one as well as the capacity to expand with demand. Fast turn up times are achievable as you control the maintenance window.

## Supported

Fully managed platform with options for up to 99.999% availability SLA. Monitored by the euNetworks NOC with fault management and local metro support.
