Cloud Connect

Our Cloud Connect interconnect service provides a multi-cloud environment across 480+ data centres. Cloud Connect gives you a secure, private and direct connection from your business to all major cloud service and providers. Your data can be transferred, stored and used outside of the unpredictable public internet.

euNetworks' Cloud Connect provides a safer, more consistent network experience than Internet-based connections. It removes capacity and contention issues, brings you new cost efficiencies and delivers a higher level of network performance for your users.

Secure, private connection

- Connectivity through a secure and private Ethernet circuit to multiple cloud environments, over a single physical port.
- Point to Point or Multi-Point available for multiple cloud providers or redundancy
- Built in diversity - Cloud Connect circuits are protected from the customer port to the Cloud port
- Circuit speeds from 50Mbps to 10Gbps
- Multi-service ports 1Gbps, 10Gbps and 100Gbps

Scalable with high performance

- Scalable in hours versus weeks
- Guaranteed by industry leading SLAs, covering packet delivery and availability (from 99.8% to 99.99%)
- Committed latency and jitter numbers for predictable connectivity to the cloud

Approved cloud partnerships

- euNetworks is an approved partner for AWS Direct Connect, Microsoft Azure Express Route, Google Partner Interconnect, Oracle FastConnect, IBM Direct Link, Salesforce Express Connect and Alibaba Cloud
- We can deliver connectivity into virtually all available Cloud service provider entry points

Data centre neutral

- Unlike individual DC suppliers, we can connect you to a single cloud supplier across different DC operators
- euNetworks directly connects into 480+ data centres across Europe and that number continues to grow

Control & visibility

- Service visibility, control and ordering all available on our customer portal

Flexible commercial options to fit your business

Fixed billing: for predictable, consistent costs

- Suits high utilisation users and small businesses
- One, fixed monthly bill
- Offers predictability and consistency

Burstable billing: putting a price on unexpected usage

- Benefits customers who expect occasional surges in traffic or would like to incrementally increase their bandwidth if usage surpasses expectations
- Traffic is measured every 5 minutes
- 5% peak moments are discarded
- Traffic above this is billed as an additional cost

Usage based billing: pay for exactly what you use

- Benefits customers who tend to use their cloud platforms on demand and not consistently through the day
- Billing is based on time utilisation
- Traffic is measured every hour
- Once the threshold of 64Kbps is reached, a full hour is invoiced
