Case study

Powering Secure Data Migration for a Leading Finance Organisation

In partnership with a System Integrator and a leading Data Centre Provider, euNetworks delivered a secure, high-performance connectivity solution for a leading bank. This collaboration highlights how our expertise, combined with trusted partners, can solve complex data migration and replication challenges for highly regulated industries.

The Challenge

The finance institution and its IT partner needed to migrate and replicate sensitive banking data to a new, high-end data centre environment. This required moving data between multiple data centres in Frankfurt, all while meeting strict security, privacy, and compliance standards. The project was under significant time pressure, making speed and reliability essential.

Our Solution

euNetworks worked alongside a leader in data centre services to deliver our Private Connect MOFN solution - a dedicated, secure private network designed for the most demanding requirements. We provided:

- 4x40G Wave
- 2x10G Wave
- 36x8G Fibre Channel

Connecting four major data centres in Frankfurt, our solution included dedicated fibre and equipment, ensuring the customer data remained secure, accessible, and compliant.

The Impact

With our partner's state-of-the-art data centres and euNetworks' ultra-low latency, high-capacity connectivity, the finance customer now enjoys a robust, scalable infrastructure. The migration was completed securely and efficiently, and the long-term data replication needs are fully supported, safeguarding banking operations and customer trust.

Why it mattters

If your organisation is facing challenges around data migration, hardware refresh and security, euNetworks' Private Connect solution, delivered in partnership with data centre providers and leading system integrators, is the proven choice for secure, high-performance connectivity. Let us help you power your next transformation.

Why euNetworks

This project demonstrates euNetworks' ability to deliver complex, time-sensitive connectivity solutions for large enterprises, especially those in finance and other sectors handling sensitive data. Our partnership with data centre providers and system integrators ensures customers receive a holistic, reliable, and future-proof approach to their connectivity needs.
