

Super Highway

Frankfurt to Strasbourg

Our newest Super Highway route, providing diverse, high-capacity long-haul connectivity between Frankfurt and Strasbourg.

- Spanning a total of 247km and built with new, high-capacity fibre.
- Delivering route diversity that avoids existing high traffic areas and increases resilience.
- A high fibre count system providing scalable growth for future bandwidth demands.
- Direct connectivity to 76+ data centres in our Frankfurt metropolitan network, alongside seamless connection into our 600+ connected data centres across Europe.
- Two new ILAs: ILA sites are built with highly efficient air conditioning, which uses less power for cooling, reducing the system's carbon impact.

Super Highways

We're reimagining long haul connectivity with our new, state-of-the-art Super Highway networks.

Purpose-built to provide direct, diverse, high-capacity bandwidth between Europe's busiest connectivity regions, these high-performance networks are designed to avoid common capacity bottlenecks and areas of congestion.

Our Super Highways combine seamlessly with our fibre-based metro networks and our extensive European footprint, connecting to key data centres.

Designed, owned and operated by euNetworks, these networks have been developed to meet Europe's demand for AI and Cloud-ready infrastructure today and into the future.
